

Reservation & Dispatch

s y s t e m s

All your bookings and fleet information at your fingertips!

The Reservation System is a fully integrated and automated PC based software which tracks your bookings from the time a trip is quoted to the invoice. Since it can be operated on a stand-alone PC, you won't need an expensive overhaul of your current computer hardware. It is easy-to-use and will maximize your charter sales team's productivity while allowing management to access information from their workstations.

The Dispatch System organizes all the bookings by date and time order and displays up-to-the-minute changes on the dispatch screen. Driver and fleet availability can be instantly searched without leaving the dispatch screen. It provides the dispatcher with the driver work orders, expense allowance envelopes, driver schedules and utilization reports. It will maximize your fleet and help efficiently manage your drivers.

No matter if your fleet consists of 5 or 500 vehicles, these two systems are an affordable starting point to a fully automated Charter Management System.

Complete trip details on one easy to read screen

At the heart of the Reservation System is a fully integrated screen that places trip details in a manner which can be easily read and searched by users. It lists trips by different criteria and allows you to pull up orders in an instant without the paper shuffle. It includes a number of search options which gives instant access to trip details during customer calls. It even allows you to duplicate a booking with the touch of a button. The flow of the information is such as to prevent missing trip details. You'll be amazed at how fast you'll complete a booking and fax a confirmation order right from your screen.

Hundreds of management and statistical reports are readily available or customize your own.

We interface with off-the-shelf accounting packages so that charter revenues won't have to be re-keyed

An electronic dispatch board

The Dispatch System's electronic dispatch board provides dispatchers with an overview of daily bookings. It clearly separates multi-vehicle moves and displays trip information without cluttering the screen. Full-screen details are available by highlighting a trip and using a function key.
